

# Managing Established Pest Animals

An area north of Holbrook is the first pest animal monitoring project to take place under the new Murray Regional Strategic Pest Animal Management Plan. The project has used strategically placed fixed cameras to capture data on pest animals in the area, with a particular focus on wild deer. The information will then be used to determine population densities and guide requirements for follow-up control options.

**Kirk Stone, Strathbogie Wildlife**, will be presenting his specialist night vision and thermal technology equipment and discuss how its being used to control over abundant species on public and private land.

Holbrook Landcare will also be on hand to provide an update of the deer monitoring project.

**Friday 17 May at the Holbrook RS Club**

**6.30pm to 8.30pm (upstairs room)**

**RSVP - E office@holbrooklandcare.org.au or T 6036 3181**

(for those interested, there will be an outside demo of thermal technology equipment, dress accordingly)
