Holbrook Landcare's Acid Soils Initiative

Join Holbrook Landcare at an afternoon workshop to build on soil acidification management knowledge and further explore local issues relating to sub soil acidity and acid stratification in our soils. Information will follow on from the last acid soils workshop held in August 2019.

Helen Burns and Jason Condon from NSW DPI will provide an update on the establishment of 2 large scale local acid soil trail sites which will provide strategies for local conditions, based on local soil data, made possible through funding from the National Landcare Program and NSW DPI. Topics will also include:

- **How low should pH's level get before we implement active management strategies?**
- **Are current liming practices addressing acid soil constraints below 5-10cm?**
- **How can we better manage our soil inputs to give us the best return on investment?**

Ashley Paech, a local mixed farmer, will be on hand to help turn research outcomes into practical management strategies.
