

## Want to get more out of your soil test results?

### Join us for a live and interactive discussion on efficient soil sampling

Are you getting value out of soil testing? Do you need to revise your soil testing program? Why soil sample? When, how and where should samples be taken? What can you do with the results that you get? These issues and more will be covered by Sue Briggs (CSBP) and Jason Condon (Graham Centre -NSW DPI and CSU) in live presentation.

Further discussion will include:

- Variability in the landscape and how information can be used to formulate a sampling strategy
- A demonstration of CSBP DecipherAg; a web-based platform that records and saves all your soil sampling sites and results in one location as a way to take the complexity out of sampling and data management

**Webinar: Tuesday 9<sup>th</sup> June – 7:30pm**

To join this webinar, contact the Holbrook Landcare Office, 0260363181 or email Phoebe [phoebegulliver@holbrooklandcare.org.au](mailto:phoebegulliver@holbrooklandcare.org.au) and we'll send you the zoom link

This project is supported by MLA (Acid Soils Discussion group)
